

## Why do we trust Google?

80% of Google's revenue is from ads  
Is Google a technology company or an advertising agency?  
Our eyes are the products that are sold for clicks  
What does it mean to be free today? Gmail is free, but can technology liberate us?  
Your browser knows more about you than you do  
What is the value of your search history?

## Did you connect to public Wi-Fi?

Data flows freely and unencrypted through the ether  
How much of those packets are yours?  
Convenience is king  
What have you given up for convenience?  
We are surrounded by black boxes  
Have we reached the limits of human comprehension?

## How long does it take to crack your password?

7 characters - 0.29 millisecs  
8 characters - 5 hours  
9 characters - 5 days  
10 characters - 4 months  
11 characters - 1 decade  
12 characters - 2 centuries

```
user@hostname$ sudo ./honeypot
Running exploit
Initialize webserver
Network scanning.....
.....
.....User found
user@hostname$ cat password.txt
1234
password
qwerty
```

## Did you give me your password?

```
login
football
welcome
abc123
princess
password1
user@hostname$ sudo ./changepassword
user@hostname$ sudo ./honeypot
Running exploit
Initialize webserver
Network scanning.....
```
